

Sterling Water Systems, LLC, a subsidiary of Porta Via Water Company, LLC, located in Wichita, Kansas is the manufacturer of Sterling Water Conditioners. Sterling Water Conditioners and RO Systems are sold throughout parts of the United States and Canada through local distributors. In areas where there are no local distributors, retail sales of Sterling Water Conditioners and RO Systems are handled by the Good Water Company which has been providing a broad range of water treatment and purification solutions for residential, commercial and industrial customers since 1984.

Working in conjunction with Wichita State University and combining advanced materials and electro-kinetic technology to keep mineral particles from attaching to pipes, fixtures and surfaces, Sterling Water Conditioners are reducing the undesirable effects of hard water.

The Sterling Water Conditioner, utilizing its patent-pending technology, is the first and only water treatment appliance to pass the anti-scale performance and testing requirements contained in IAPMO's IGC 91. Our products are **UPC and ETL listed and compliant with NSF and UL regulations.**

Sterling Water does not seek new standards for the sake of being different. We are different because we are better.
